

IT Lab Portfolio

This portfolio highlights my hands-on labs and troubleshooting experience focused on Windows Server administration, networking, Active Directory, and real-world MSP-style support scenarios.

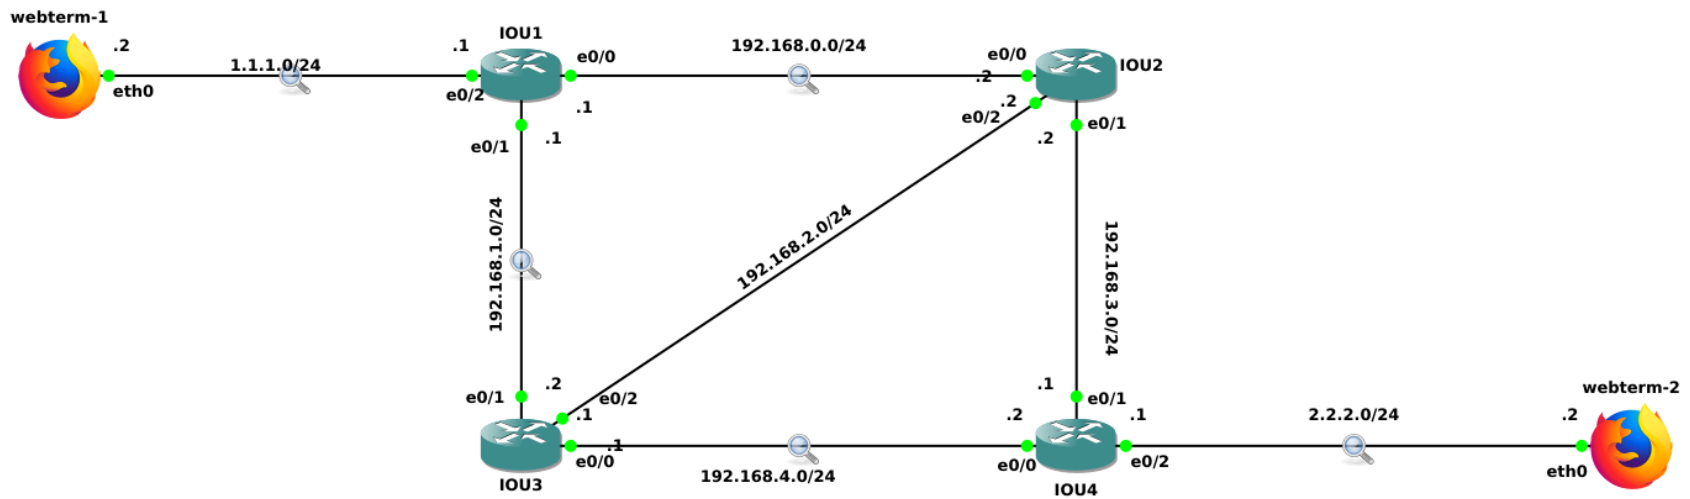

Active Directory & Group Policy Administration

- Built and configured a Windows Server domain environment (janish.com)
- Created and managed users, Organizational Units (OUs), and security groups
- Configured Group Policy Objects (GPOs) for drive mapping and password policies

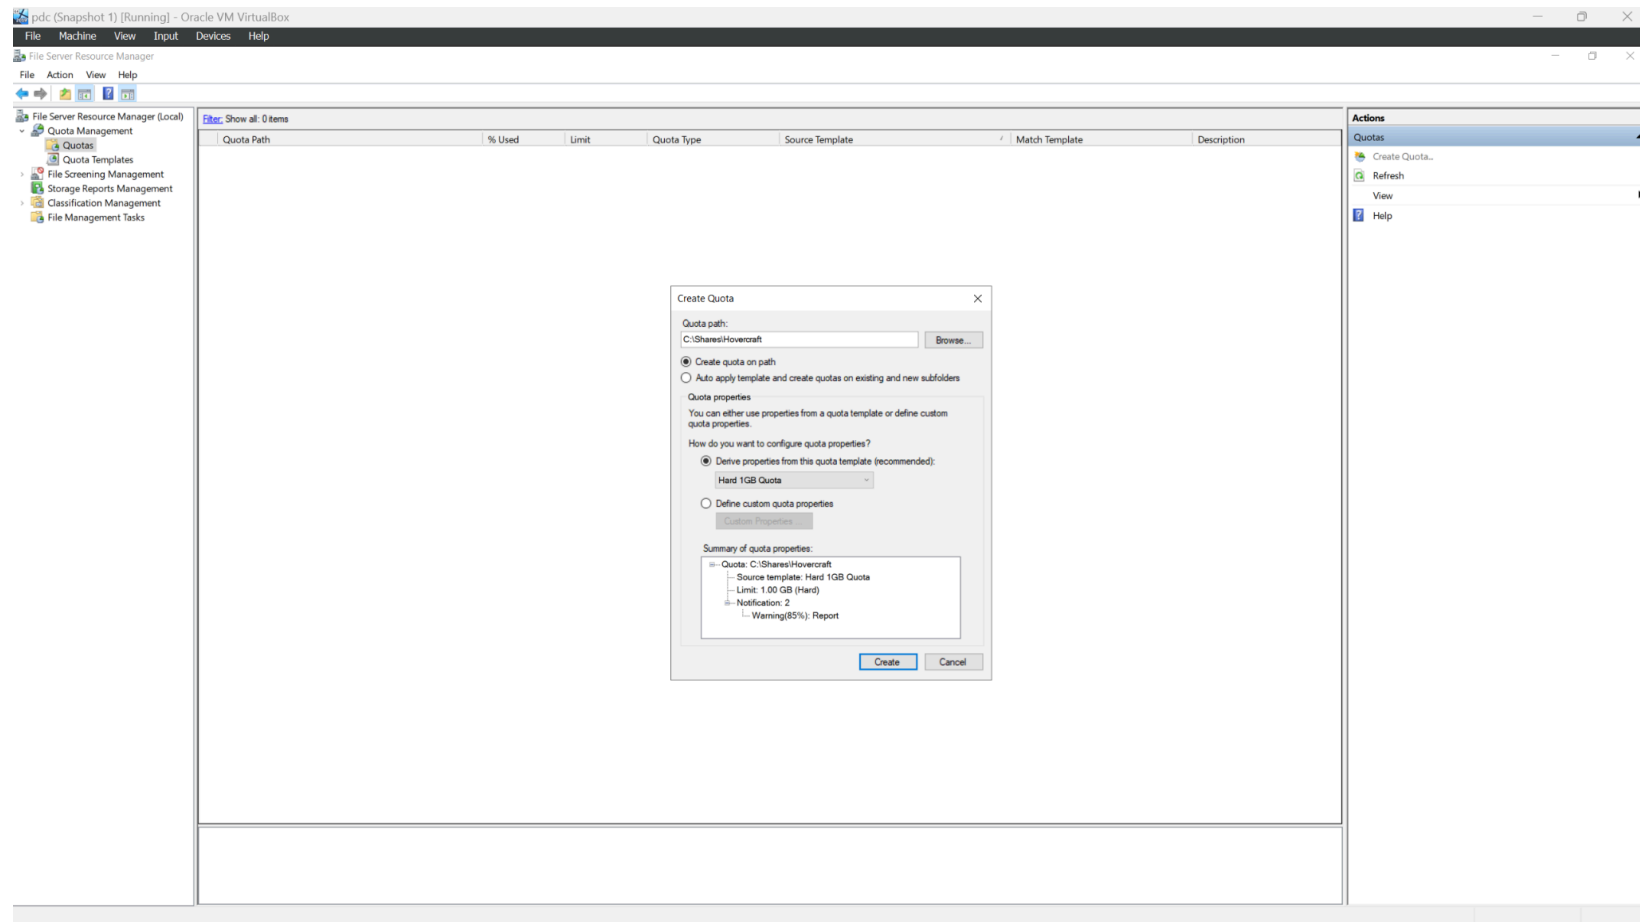

Network Troubleshooting – GNS3 & Cisco Packet Tracer

- Designed multi-subnet network topologies with VLAN segmentation
- Configured inter-VLAN routing using router-on-a-stick
- Diagnosed connectivity issues involving routing, DNS, and IP addressing
- Verified communication using ping, tracer, and interface troubleshooting

File Server & FSRM Management

- Configured NTFS and Share permissions for department-based access
- Resolved access conflicts between permission layers
- Implemented File Server Resource Manager (FSRM) quotas
- Configured file screening policies for controlled storage management

Core Infrastructure Services (DNS / DHCP / SMTP)

- Configured DHCP scopes for automatic IP assignment
- Set up and troubleshot DNS name resolution issues
- Configured SMTP services in a Windows Server environment
- Resolved client connectivity and IP allocation problems
